

Extend the selected design.

A mobile-first screen system for PhysiX, with a focused booking journey and a clear Gymaf boundary.

The visual anchor

Keep the cool mint canvas, navy type, deep-teal actions, leaf logo, anatomical issue tiles and custom service imagery from the supplied reference.

The deliberate changes

Charlie: retain the compact profile-card structure; use a deep-teal surface with a white heading and pale-mint supporting text. This is the current request, not a site-wide dark redesign.

Hierarchy: keep Book visit filled and Online consult outlined. Use one dominant action per task and more vertical breathing room.

Real mobile layout: use scrolling pages and readable horizontal rails. The home page is shown in upper and lower scroll positions, not compressed into one viewport.

Booking: Time → Details → Review → Confirmation. Keep Back, progress and one bottom action; remove the public dock during the flow.

Supplied visual reference. Generated people, reviews and badges are not verified clinic content.

What this package is

A reviewable screen plan plus structural wireframes. High-fidelity image concepts are separate review outputs. No production code, booking, authentication, payments or repository changes are implied.

The public screen map

Paths below follow /:lang. English is used for visual review; Bulgarian fitting is a separate acceptance check.

Screen / state	Route / role	Primary action
Home: upper + lower scroll	/	Book visit
Services	/services	Open service
Service detail: Sports Rehab	/services/[slug]	Book visit
Book: choose time	/book	Continue
Book: your details	/book/details	Continue / verify
Book: review	/book/review	Confirm booking
Booking confirmation	/book/success/[id]	View appointment
Online consult	/online (availability gated)	Book online visit
Charlie	/charlie	Book visit
Clinic / contact	/clinic	Directions / contact
FAQ	/faq	Read / book
Search	Service-finder state	Open matching service
Menu	Public navigation overlay	Choose destination
Account entry	/sign-in → /verify	Send code
Recovery Plans	/programmes (future)	Explore preview

Scope beyond the main concepts

Document and implement loading, no results, no times, invalid details, expired code, unavailable time, offline and provider-error states. Use a shared reading template for legal pages. Programme purchasing and the private patient/player workspace remain outside this visual pass.

Home: two scroll positions

Low-fidelity structure. Gray blocks represent media and surfaces, not a proposed replacement art direction.

01 / Home, upper viewport

/:lang

02 / Home, lower viewport

Same page, after scrolling

Upper: the hero leads into finding care. Preserve the original visible labels. Let the service rail continue below the fold.

Lower: Charlie stands out through a local color change. No full-width dark story band, oversized badges or repeated promotional CTAs.

Services: browse, then understand

Keep the same image treatment and rounded card family. A catalogue is not a second home-page hero.

03 / Services

/:lang/services

Browse: readable cards, short descriptions and a full-card link. A visible “View all” route complements the home rail.

04 / Service detail

/:lang/services/[slug]

Detail: answer what the visit is before asking for commitment. The service is context; booking still selects a valid visit offering.

Booking: time and details

The public dock is replaced by one flow-action region. The three-step progress is Time / Details / Review.

05 / Choose a time

/:lang/book

Your details

First visit / Mon 14 Sep, 10:30

Full name

Email address

Phone, only if operationally required

Privacy and appointment policy links.
No marketing opt-in bundled into booking.

Email verification appears here when needed: one pasteable code field.

Continue

Details: collect minimum contact information. Keep labels above fields, retain inputs on errors and preserve the booking draft on Back.

Booking: review and confirmation

A confirmation is a real persisted result in production. In the concept it must be visibly labelled as an example.

07 / Review booking

/:lang/book/review

Add to calendar

Directions / visit preparation
Use verified information only

If the email fails, the appointment can still be booked.
Show the real delivery status separately.

Back to Home

Review: every editable section keeps the other selections. A stale slot returns to time selection without discarding safe details.

Success: only appear after persistence. Avoid confetti, upsells and fabricated confirmation emails; make the next practical action clear.

Online care and account entry

These are public entry points, not a new signed-in Gymaf dashboard or an AI practitioner.

09 / Online consult

/:lang/online

PhysiX

Book
Online
Account

Account: useful without a Gymaf invitation or subscription. Keep public PhysiX navigation; do not introduce a second branded login.

Shared rules and handoff gates

Use the high-fidelity concepts for art direction and these contracts for behavior. Neither is approval to publish invented content.

Component targets

				
Canvas #F7FBFA	Surface #FFFFFF	Navy ink #10172B	Action #11695C	Mint #D8EEE8

Design at 390px, then check 320px and larger screens. Start with 20px gutters, 16px body copy, 22–24px section headings, 32–36px hero type and 48–52px controls. Treat these as design targets, not a completed accessibility assessment.

Use the same sans-serif roles, leaf logo, rounded white surfaces, image-led cards and equal Home / Book / Online / Account dock throughout. Charlie gets a compact dark-teal card. No raised middle dock button, device chrome, tiny three-up service cards or full-width dark testimonial band.

State and interaction acceptance

Preserve field values, selection and scroll context on Back. Define loading, empty, inline error, expired code, slot conflict and network recovery. Use a single pasteable verification field. Mark selection through more than color. Test focus, keyboard overlap, safe areas, text expansion, contrast and reduced motion.

PhysiX + Gymaf boundary

Keep PhysiX public care discovery and booking in the mint/navy family. Preserve Gymaf’s existing lavender, green-accent and typography roles in its own workspace. Do not assume shared sign-in, payments, private data access or live integration is implemented. Educational programme purchases and clinician-assigned care plans are different entitlements.

Production content and review

Reference portraits, claims and reviews are illustrative. Fees, dates, durations and availability are labelled examples. Verify practitioner identity, photography rights, testimonials, service scope, clinic details and policies before launch. Keep future programmes gated. No repository was modified for this package.
